

Denver Rotary Club Seminar on the latest technological innovations in the Auto Industry

Cars may not always get more fuel-efficient, but manufacturers are making them more technologically advanced.

On Thursday, March 15 at noon, the Denver Rotary Club will meet at the Denver Athletic Club, 1325 Glenarm Place to hear about new and improved automotive technologies.

Two presenters, Tim Jackson, president of the Colorado Automobile Dealers Association (a trade association of 260 new car and truck dealers), and Laura Dooley, manager of State Government Affairs for the Alliance of Automobile Manufacturers, will present the latest safety figures, new electronic technologies, and the latest on alternative fuel and hybrid cars.

Everyone is welcome to attend!
